Derwent Abstract: (JP08026907A) Emulsifiable concentrate type agrochemical formulation comprises: (a) at least one agrochemical in an amt. of 45-675 g/l having m.pt. o up to 130 deg.C; (b) a plasticiser comprising rosin or a water insol rosin deriv. in an a.t of 5-525 g/l, (c) a surfactant in an amt. of 40-300 g/l and (d) a polar solvent (completely or partially soluble in water), to make 1 l of the emulsion. The agrochemical is pref. acetanilide, benzoate, brominated benylate, chlorinated benzyrate, chlorinated hydrocarbons, hydroxybenzonitrile, imidazole, nitroaniline, nitroxylen, organic phosphorus derivs., phenoxy-phenoxy-alkane carboxylic acids, pyrethroid or triazole.  
**USE/Advantage** - Used as an emulsifiable concentrate type insecticide for insects, e.g. Blattella germanica. The agent prevents irritation and improves biological activity.  
In an example 465 g of melted Prochloraz was mixed homogeneously with 200 g of 'Granolite M' (RTM: methyl ester or rosin), 170 g 'Emulan EL' (RTM: ethoxylated castor oil 36 Mol EO), 50 ag n-butanol, 50 g Agsol ExBLO and 200 g dipropylene glycol to give a clear and homogeneous liq.
